

# Project CY 8609

## Task

1. Describe the technical facility located near:

SG1A

2. Within the following ten year period determine if and when any "special events" occur:

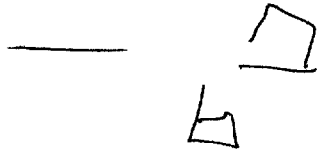

\* Note: If you do find any "special events" - - - subsequent sessions will be focused on each separate "special event."

As for Mills

Site involves a facility with an overall purpose to produce something (not necessarily physical). A smaller structure w/in facility compound ~~does~~ produce something, perhaps hazardous. Activity/operation picked up at Site ca. late '83, increased, then decreased last quarter 1984, then increased again & continues at high level. Idea that facility has been here along time but is now being "converted" or is host to a new sort of project than what it was originally intended for. <sup>may have to do w/ a stage</sup> (See p. 9) that does something, <sup>intensity</sup> perhaps involving high temperature, ~~physics~~, "flux" or whatever. Sense of physical + information isolation, i.e. like a S.A.P. here might be.
